Memo No.Ch-16/GM/C/R-17/356/2005/F-18

Dated: 9/10/2013

Subject: Release of Pending Industrial connection.

Please refer to SI No.13/2013 dated 21/8/2013 vide which it was decided to release the pending HT connections of all categories upto the load of 500 KVA wherever capacity available during the lean period. In order to rule out any apprehension of overloading during peak season, an undertaking from such consumer may be taken in the form of affidavit that if required their load can be restricted wholly or partially to avoid overloading of the system. SDO (OP) concerned is competent to allow the release of such connection. However, it should be ensured that loading on power T/F does not exceed permissible limit allowed by Nigam.

It has already been decided that seniority of the HT connections be maintained S/Stn. wise by the SDO concerned.

Now, the matter has been re-considered and decided that the load in excess of 500 KVA upto 1 MVA (1000 KVA) authority immediately superior to the load sanctioning authority {CE 'OP'} will consider and sanction such loads on merit subject to applicability of other conditions i.e., taking an undertaking from the consumer not to draw power during peak season e.g., paddy season.

Cases beyond load 1 MVA will be put up through Director (OP) after due diligence and with comments / recommendations for consideration and approval of worthy CMD.

The above facility to release the connections during lean period shall remain in force upto 31.12.2013.

SI No.13/2013 is amended to this extent only.

'This sales circular does not infringe (directly or indirectly) any part of the tariff order issued by the Commission.'

The above instructions should be brought to the notice of all concerned for careful and meticulous compliance.
